

# Sureprint Semi & Three Quarter Automatic Screen Printing Machines.

Sureprint has developed a new range of printing machines which allows the user to utilise the same machine for printing a wide variety of substrates of different types. The machine pictured is a semi automatic printer with sliding table, it also has the ability to be used as a clam type machine where substrates which are not suited for use with sliding bases e.g. glass and fabric can still be printed on the same machine.

The PC2000 semi automatic printer in its role as a sliding table printer, can be fitted with a take off system and be fitted with an ancilliary UV dryer and collection tray if required. The machine uses a pneumatic lockover system, has a motor driven head and motor or pneumatic driven base. Easily adjusted pressure controls. Each machine can be used to print thick and thin substrates having good height adjustment upto 60mm.

Features:-

- Sliding table semi automatic.
- Single phase machine.
- Standard or special sizes built to order.
- Snap off feature.
- Motor driven head and base.
- Pneumatic lockover.
- User friendly controls easy to operate.

The PC2000 can be used as a clam action printing machine by switching to the appropriate settings on the control panel. The sliding table stays in the in position and the machine can be used for printing thicker heavier substrates such as glass, fabric or plastic components. Loading the screen, squeegees, flood coaters etc, is very quick and easy minimising set up times. This range of machines has been designed to be very flexible in how it can be used and what is printed on it. It is also simple to set up and use requiring only a small amount of training.
